K-8 Mathematics Comparative Analysis
The K-8 Mathematics Comparative Analysis summarizes the relationship between grades K-8 of the 2001 Ohio Academic Content Standards (Ohio ACS) for Mathematics and the 2010 Common Core State Standards (CCSS) adopted by Ohio on June 7, 2010. The purpose of this document is to assist educators in reviewing their current curriculum and instruction in preparation for the transition to the CCSS.

The CCSS can be found at www.corestandards.org.

The structure and organization of the standards has changed. The formats for the 2001 and 2010 standards are not parallel. While there are clear connections between both sets of standards, there also are significant differences.

2001 Academic Content Standards for Mathematics Format
Standard
Benchmark (by grade band)
Indicator (by grade)

2010 Common Core State Standards for Mathematics K-8 Format
Grade
Domain
Cluster
Standard (Statement)

This document connects the CCSS clusters and standards with the Ohio Academic Content Standards grade level indicators. The content is sorted into three columns and is classified by what is new, what is no longer a focus, or what still exists and is modified in some way.

How to read the document
The first two columns are written in the context of the Common Core: italicized Domains, followed by the cluster statement and then the coding for the specific standards. (4.G.6) means grade 4, Geometry, standard 6. Items in the NEW column are new or significantly different from a current interpretation or practice. Notable comments are indicated by brackets [ ]. The third column identifies the Strand and then the topic with a reference of where that topic is now found. No CCSS reference indicates that the topic does not appear in grades K-8 in the CCSS.

How to use the document
CCSSM is designed to provide focus and coherence while at the same time address 21st Century Skills, College and Career Readiness and increased rigor. The Standards of Mathematical Practice in the CCSS expand the expectations from the Mathematical Processes (OACS) of representation, reasoning and proof, communication, problem solving, and connections, to include adaptive reasoning, strategic competence, conceptual understanding, procedural fluency and productive disposition from Adding It Up. Understanding these “Mathematical Practices” helps to frame the depth of understanding or cognitive demand of the content standards. Additionally, the Introduction of each grade level of the CCSSM identifies Critical Areas of Focus for that grade. In these descriptions, connections are made between domains, clusters and standards across the grade illustrating further the concepts and relationships students are to make. The Mathematical Practices and the Critical Areas of Focus are instrumental in truly understanding the intent of the Domains, Clusters and Standards. It is recommended that familiarity with the Standards of Mathematical Practice, pages 6-8 of the...
CCSSM and the grade level Critical Areas of Focus should occur prior to analyzing the Comparative Analysis.

The Comparative Analysis is a useful tool for confirming or quickly seeing the differences between the two sets of standards. It is recommended that thoughtful reading of the Common Core State Standards for Mathematics is a beneficial experience for teachers who are transitioning their instruction. It is through this careful inspection that deep understanding will develop. In alignment with this belief, guidelines for getting to know the Standards of Mathematical Practice and the Critical Areas of Focus precede the usage of the Comparative Analysis.

**Getting to know the Standards for Mathematical Practice**

- Read a Standard for Mathematical Practice
  - What is the meaning of the practice?
  - How will the practice look at my grade level?
- Repeat for each Mathematical Practice

**Getting to know the Critical Areas of Focus**

Please refer to [Critical Areas of Focus](http://www.education.ohio.gov/GD/DocumentManagement/DocumentDownload.aspx?DocumentID=100516) on the Mathematics webpage or place this address in your browser to access suggestions for becoming familiar with the Critical Areas of Focus.

**Using the K-8 Comparative Analysis**

Materials: K-8 Comparative Analysis, Grade Level CCSSM pages, Standards for Mathematical Practice

The process outline below is a guide for careful inspection and deeper understanding of the CCSSM.

- Read the Mathematical Practices and the appropriate Critical Areas of Focus for the selected grade level
- Read a Cluster and its Standards in the CCSSM
- Discussion:
  - What does the Cluster mean? Think about:
    - What Critical Area(s) of Focus does (do) the Cluster relate to?
    - What Mathematical Practice(s) relate to the Cluster?
    - What other Domains and Clusters are connected?
  - What are the concepts in the Cluster? Highlight in (red).
    - Concepts refer to big ideas, understandings or meanings, strategies and relationships. Understanding these concepts underlies the development and usage of skills and procedures.
  - What are the skills and procedures in the Cluster? Highlight in (blue).
    - Skills and procedures refer to rules, routines, and algorithms. They evolve from the understanding and usage of concepts.
How is the intent of the Cluster different from current practice?
   - Determine if the content is new or modified.
   - Pay attention to details. Sometimes a major change is what is not there, especially in Measurement and Data, and Geometry.
   - If a Curriculum Specialist is working with the group, the specialist can confirm by locating the Domain and Cluster on the K-8 Comparative Analysis.

- Repeat for each Cluster in the grade.

Further work would answer:
   - What instructional strategies would be most effective?
     - Refer to the grade level Model Curriculum on the Mathematics webpage for clarification.
   - What materials and resources are currently available for teachers to use in developing instructional strategies for the Cluster?
   - What materials and resources are needed for teachers to use in developing instructional strategies for the Cluster?
   - What rich problems are appropriate?

- What instructional strategies would be effective?

Watch for new resources, webinars, podcasts and professional development opportunities throughout the school year to assist in understanding and transitioning to the Common Core State Standards. Remember, full implementation is targeted for the 2014-2015 school year.

• *Measurement* Order and conversion of units of measure (See Grade 6.G)  
• *Measurement* Rates (See Grade 7.RP)  
• *Geometry* Geometric figures on coordinate plane (See Grades 6-7.G)  
• *Geometry* Nets (See 6.G.4)  
• *Patterns, Functions and Algebra* Algebraic expressions (See Grades 6-7.EE)  
• *Patterns, Functions and Algebra* Grade 8 learning is limited to linear equations  
• *Patterns, Functions and Algebra* Quadratic equations (See HS)  
• *Data Analysis* Graphical representation analysis (See Grade 6.SP)  
• *Data Analysis* Measures of center and spread; sampling (See Grade 7.SP)  
• *Probability* (See Grade 7.SP) |
| • *Functions* Define, evaluate, and compare functions. (8.F.1-3)  
• *Functions* Use functions to model relationships between quantities. (8.F.4-5)  
• *Geometry* Understand congruence and similarity using physical models, transparencies, or geometry software. (initial introduction) (8.G.1-2)  
• *Geometry* Understand and apply the Pythagorean Theorem. (initial introduction) (8.G.6-8)  
• *Statistics and Probability* Investigate patterns of association in bivariate data. (8.SP.1-3) |
