Hook Elementary

50 Years Old

Kyle Elementary

66 Years Old

Our school buildings are well maintained so people are amazed by their age. The only building with air conditioning is the youngest building, Troy Junior High School, at 44 years old. The Troy community loves their buildings and appreciates the history connected with each building. As with any structure with age there are challenges to update the basic electric, plumbing, mechanics, and technology. These structures not only are our schools but serve as a meeting places for their neighborhoods as well as city recreational venues for it many residents. All buildings have been update to include wireless capabilities for technology use and educational instruction. Our buildings as with any structures with age needs improvements made and updates periodically. We are constantly complimented on how good our buildings look considering their age.
